Combinatorial chemistry - Wikipedia

Combinatorial chemistry has emerged in recent decades as an approach to quickly and efficiently synthesize large numbers of potential small molecule drug candidates. In a typical synthesis, only a single target molecule is produced at the end of a synthetic scheme, with each step in a synthesis producing only a single product.

Combinatorial Chemistry | SpringerLink

Combinatorial chemistry constitutes a branch of the molecular sciences, providing an array of concepts and methods to solve molecular optimisation problems (in drug research and beyond) more rapidly and efficiently than classical synthetic approaches.

What is Combinatorial Chemistry

What is Combinatorial Chemistry? Combinatorial chemistry is a laboratory technique in which millions of molecular constructions can be synthesized and tested for biological activity.

Combinatorial chemistry - University of North Florida Diemar G. Schmid, Philipp Grosche, Holger Bandel, Günther Jung Abstract: The diversity of compound collections required for finding lead structures in pharmaceutical research can be provided by means of combinatorial organic chemistry.

Combinatorial chemistry in drug discovery - ScienceDirect

Combinatorial chemistry has been used for both drug lead discovery and optimization [12, 13, 14 ]. Figure 1 summarizes the various combinatorial library methods, the nature of the library compounds involved and the screening methods available to each of the technologies.

Combinatorial Chemistry in Drug Design New Drug Approvals

Combinatorial Chemistry in Drug Design. Combinatorial chemistry is somewhat hard to define. Essentially, it is a collection of techniques which allow for the synthesis of multiple compounds at the same time.

COMBINATORIAL CHEMISTRY - American

### Chemical Society

One of the attractions of parallel-synthesis chemistry, combinatorial chemistry, or whatever you want to call it, was numbers. Many of us believed that 'numbers' were the answer to diversity. Unfortunately, the diversity we created was often irrelevant, or only semirelevant, to the biology we were interested in interfacing with."

### Combinatorial Chemistry & High Throughput Screening

Combinatorial Chemistry & High Throughput Screening (CCHTS) publishes full length original research articles and reviews/mini-reviews dealing with various topics related to chemical biology (High Throughput Screening, Combinatorial Chemistry, Chemoinformatics, Laboratory Automation and Compound management) in advancing drug discovery research.
